HARVARD ALUMNI CARD

The screenshot shows the PROXY Networks website. The header includes the company logo, navigation links (SOLUTIONS, PRODUCTS, DOWNLOAD, COMPANY), and contact information (1-877-PROXY-US, social media icons, BLOG, SUPPORT, CONTACT). The main content area features a large heading: "PROXY Pro Remote Support Software". Below this is a sub-headline: "Thousands of IT teams at banks, healthcare organizations and legal firms trust PROXY Pro for secure remote support and online collaboration." There are four columns of benefits, each with an icon: 1. One-click remote access to support servers, desktops and mobile devices anytime, anywhere. 2. Reliable remote control and remote management tools to fix problems quickly and easily. 3. Privileged access management for enhanced security, comprehensive activity logging and configurable screen recording for security and auditing. 4. Simple, on-premise deployment to keep data and security credentials under your control at all times. A large call-to-action button says "Begin Your Free 30-Day Trial of PROXY Pro 8 TODAY!" with a "DOWNLOAD FOR FREE" button and a "Scroll" indicator.

IMPROVE REMOTE SUPPORT WITH PROXY PRO 8

With Proxy Networks, you can provide remote support and troubleshoot PCs, servers and mobile devices securely. Our encryption, authentication and privileged access management allows our customers to define their own security levels and flexible remote access policies. PROXY Pro is easy to use and designed to fit any budget, making it easy to meet even the most complex remote desktop management needs.

REMOTE DESKTOP SUPPORT

Flexible remote desktop connections to any PC, server, and mobile device in true on-demand fashion lets IT professionals remotely support any device, from any computer. You and your IT support team can now easily remote support and manage connections, resolving issues more efficiently with the Proxy Gateway and Management Console.

SECURE END-USER REMOTE SUPPORT

Proxy Networks' software supports any system or endpoint, enabling IT professionals to provide remote support immediately and securely both on and off their network. They can also use Chat, File Transfer, Remote Print, create Screen Recordings securely and allow others to join the connection with our Many-to-One connectivity model. Proxy Networks incorporates the highest standards of security, using SSL and Windows Security Model for authentication. Set your own control permissions to user groups in your Active Directory domain, and control all of your organization's remote access restrictions with one easy-to-use console.

CUSTOMIZED REMOTE ACCESS

We provide remote support for all platforms, including virtual computers and Thin Clients, ensuring secure remote access instantly, regardless of the user's system. Use our PROXY Deployment Tool and manage host settings anytime to create custom configurations to remote support your machines, or use our new Host on-Demand for all your on-the-fly remote access connections.

PROXY NETWORKS

The screenshot shows the Proxy Networks website. At the top, there is a navigation bar with the company logo and links for PRODUCTS, PARTNERS, COMPANY, and TRIAL. A secondary navigation bar includes a phone number (1-877-PROXY-US), social media icons for Twitter, Facebook, and LinkedIn, and links for BLOG, SUPPORT, and CONTACT. The main content area features a large 'DOWNLOAD' heading and a form to request access to new versions and documentation. The form includes fields for First Name, Last Name, Email, and Phone, along with radio buttons for 'I would like a free trial' and 'I am an existing customer', and a 'NEXT STEP' button. To the left of the form, there are three sections describing different editions of Proxy Pro: Workstation Edition, Gateway Edition, and Private Cloud Edition, each with a list of included components. A 'RESOURCES' section with a book icon lists 'Individual Component Manuals', 'Quick Start Guides', 'Upgrade Guides', and 'More'. The footer contains copyright information (© COPYRIGHT IT 2006-2014 PROXY NETWORKS, INC. ALL RIGHTS RESERVED), navigation links (COMPANY | SITMAP | CONTACT US | PRIVACY POLICY), a search bar, and the text 'MADE BY inSegment'.

ENTERPRISE GUIDE TO DDoS PROTECTION

DDoS attacks are the primary threat to the availability of your network, applications and online services. Learn how to protect your business from the world's leading experts in DDoS defense.

PROTECT

KNOWLEDGE IS THE ULTIMATE WEAPON

DDoS attacks can be large and have an immediate impact to your organization. They can also be subtle and difficult to detect, making your applications and existing security infrastructure such as firewalls and IPS vulnerable. Knowing what kind of tactics attackers use is the first step in detecting them, and protecting yourself.

VOLUMETRIC ATTACKS

These attacks are bent on causing congestion. They are large bandwidth consuming attacks that not only overwhelm a target's Internet facing circuits, they also cause significant collateral damage in shared network environments.

TCP STATE-EXHAUSTION ATTACKS

Millions of connections can be taken down by this kind of attack, even high capacity devices. These attacks are designed to exhaust the TCP state table in devices like firewalls, load balancers, IPS, web servers and other devices that are required to track TCP state. etc.

APPLICATION LAYER ATTACKS

These are the most deadly kind of attacks, as they can be very effective with as few as one attacking machine generating a low traffic rate—making them very difficult to pro-actively detect and mitigate. These attacks have become one of the most common DDoS attacks seen in the wild.

THE TRIPLE THREAT ATTACK

Today's sophisticated attackers are blending volumetric, state exhaustion and application-layer attacks against infrastructure devices all in a single, sustained attack. These attacks are popular because they're difficult to defend against and require a layered approach to DDoS protection.

WITH THE LATEST ON DDoS ATTACKS:

The #1 Threat to Network Availability in the Enterprise

Arbor Networks, the world's leading provider of advanced threat protection in the enterprise, carrier and mobile market segments, has uncovered pioneering results in the 2016 *Worldwide Infrastructure Security Report* — a survey of **854 organizations** around the globe giving rare, real-world insight into the evolving security threat landscape. The report explores the frequency, types, targets (such as cloud infrastructure) and business impacts of DDoS attacks network operators are up against today.

In this year's survey, enterprise respondents reported a **20% increase** in insider attacks in 2015, twice that of service providers. With the rise of BYOD in the enterprise, and nearly 40% having no solution deployed to monitor devices, it's more important than ever to know the scale of an incident: response plan effective enough to defend against this explosive growth of advanced persistent threats.

WHY ARBOR?

GLOBAL INTELLIGENCE & REAL-TIME ANALYTICS IN ONE PLATFORM

Arbor Networks' Spectrum is a platform designed specifically for security teams, from the most senior responder to next-gen analysts, to search the entire network to uncover, investigate and prove sophisticated attack campaigns within minutes, not hours or days.

Spectrum uses the network and real-time global threat intelligence to proactively — rather than reactively — identify high-risk threat indicators throughout a business' network. These global indicators conceptually identify the tactics the adversary is likely to use, combining the analysis of both packet and flow data. Arbor Networks' ATLAS Intelligence Feed is powered by ASERT, which fuels Spectrum's security analytics with more than one-third of the world's Internet traffic, empowering APT security teams to maximize the discovery, investigation and forensics of an attack.

REDUCE ATTACKER DWELL TIME FROM MONTHS TO MINUTES

Spectrum increases analyst performance to allow more time to hunt for attackers, rather than waiting passively for a critical alert. Whilst giving more time to analysts, it takes time away from threats — Spectrum can hunt adversary attack campaigns 10x faster than any SIEM or Security Forensic.

HIGH VISIBILITY FOR UNIQUE INSIGHT

Every network has blind spots. But Spectrum brings full security visibility to the enterprise to search the entire network. Only Arbor Networks' Spectrum provides this complete network transparency, enabling the discovery of complex attack campaigns in their ongoing stages. This gives APT security teams unique insight into their business' network, so that these threats can be investigated and neutralized quickly and easily with an understanding of ongoing activity.

INTUITIVE WORKFLOWS & INNOVATIVE VISUALIZATIONS

Complexity remains the enemy of security. Accordingly, proactive hunting is now the most cost-effective way of protecting against catastrophic data breaches. To address the holes created by perimeter defenses and incidences of alert fatigue, Spectrum provides an intuitive, streamlined workflow — analyzing at the speed of the analyst's thought, accelerating the pace of the incident response process and providing all the threat indicator and traffic data needed to resolve threats quicker than ever before.

WITH THE LATEST ON DDoS ATTACKS

The #1 Threat to Network Availability in the Enterprise

Arbor Networks, the world's leading provider of DDoS protection in the enterprise, carrier and mobile market segments, has uncovered pioneering results in the 2016 *Worldwide Infrastructure Security Report* — a survey of **854 organizations** around the globe giving rare, real-world insight into the evolving security threat landscape. The report explores the frequency, types, targets (such as cloud infrastructure) and business impacts of DDoS attacks network operators are up against today.

In the last year, there has been a rapid upward trend in sophisticated, financially-motivated threats, with **over half** of respondents experiencing firewall or IPS failures, **up from 38%** last year. The question is: How are service providers protecting themselves and their clients?

WHY ARBOR?

UNPARALLELED VISIBILITY AND INSIGHT

Meeting the needs of any organization, no matter how demanding, Arbor Networks ensures the availability of critical network applications with comprehensive, real-time visibility and deep security intelligence. Arbor uses actionable ATLAS intelligence infrastructure from the industry-leading experience of ASERT (Arbor's Security Engineering and Response Team), to provide a micro view of the network. Most of the world's top enterprise and government networks rely on Arbor's global, research-driven approach to solve more security threats, faster.

ALWAYS-ON, IN-LINE DDoS PROTECTION

As the risk and size of a DDoS attack grows with the increasing need for web-based applications, advanced detection and mitigation is critical for avoiding catastrophic impact on availability. Arbor Networks' APS proactively protects from both IP and HTTP attacks, reducing mitigation time to as little as five seconds. It provides protection with Cloud Signaling™ to connect local protection with cloud-based DDoS services when larger attacks threaten availability — whether inbound or outbound.

POWERFUL, MULTI-LAYERED CLOUD-BASED SERVICE

New layers of complexity in modern-day volumetric and amplification/reflection attacks requires an equally multi-layered approach in mitigation. Arbor Cloud is a complete, on-premise DDoS defense program that enables immediate protection against volumetric, state-exhaustion and application-layer attacks to maximize the availability of network infrastructure. The tightly integrated, cloud-based traffic scrubbing delivers defense from the edge of the network to the cloud.

AUTOMATED, 24/7 ATTACK MITIGATION

It's important to maintain a flow of legitimate traffic within the network while removing malicious traffic. Arbor Networks' TMS ensures superior performance with proven and automated surgical threat detection and an array of mitigation, without disrupting key network services. Its flexible and scalable architecture, as well as a choice of modes tailored to specific company needs, provides the most effective, cost-efficient, and easily managed solution for keeping even the most demanding and complex networks up 24 hours, 7 days a week, 365 days a year.

AWARDS

ARBOR NETWORKS

WHY CHOOSE ARBOR?

WORLD LEADER IN DDoS PROTECTION

Arbor's products contain the industry's most advanced and broadly deployed DDoS detection and mitigation technology. We deliver integrated on-premise and cloud-based DDoS protection against the full spectrum of the modern DDoS attacks for the world's leading organizations.

POWERFUL YET USER FRIENDLY

Arbor's DDoS protection solutions are built with the user in mind. The user interface is not only visually beautiful but also delivers intuitive workflows and powerful reports on network traffic, mitigations and services.

Combining stability with powerful DDoS prevention technology, our goal is empowerment, to help enterprises manage and defend against DDoS attacks efficiently.

WHO TRUSTS ARBOR WITH DDoS PROTECTION?

- More than 90% of the world's Tier 1 service providers
- 8 of the 10 largest cloud service providers
- 9 of the 10 largest managed security service providers
- 3 of the 6 largest social media networks
- 5 of the 6 largest U.S. cable broadband providers
- 4 of the top 6 U.S. banks based on assets under management

CUSTOMIZE YOUR DDoS PROTECTION

Arbor has the industry's most comprehensive portfolio of products and services for DDoS protection, delivering unmatched scalability, deployment and cost flexibility to meet the needs of any organization from the world's largest service providers to small and mid-sized emerging businesses.

AWARDS

CUSTOMER TESTIMONIALS

"Arbor Networks DDoS protection is both robust and easy to operate. It prevents and stops our most harmful attack mitigations. It gives us great insight into network traffic, as well as overall performance."

OPERATIONS DIRECTOR FROM EQUIX BRAZIL

"Arbor Networks technology has earned an enviable reputation in the industry as an important part of a comprehensive network defense strategy. That's why we chose them. When needed, our solution was resilient when Arbor helped block a major denial of service attack, eliminating the attack traffic while keeping legitimate traffic flowing to and from our customers."

CTO, HOSTOPA

"There was a huge amount of work done by Arbor consulting engineers and developers during pre-incident phase of the event and as a result we were able to implement new features to mitigate advanced DDoS attacks and to increase our mitigation capacity limits. Due to the collaboration we have with Arbor, we were able to deliver continuous services to all of our customers during the Sochi Olympic Games."

ROSTELECOM'S HEAD OF NETWORK SECURITY

LEARN MORE ABOUT DDoS PROTECTION

MORE THAN PRODUCTS AND SERVICES

When you choose Arbor, you get far more than products. You get the industry's leading DDoS prevention experts, working on your attack mitigations, researching the latest botnets and malware attacks and delivering DDoS protection directly to your deployments.

Your teams will learn how to make DDoS protection a part of operational activities, receive regular training on proper DDoS prevention & response, and running simulations of DDoS attacks against the network. We'll help you build an ideal and mature DDoS protection team that includes security, network, ISP connectivity so all functionality is accounted for.

You'll also benefit from proven methodology for handling DDoS attacks, helping teams through six phases of DDoS attack response: Preparation, Identification, Classification, Containment, Isolation and Mitigation. Organizations that think deploying technology is the answer to DDoS prevention often find themselves in a reactive scramble under the pressure of an attack. Organizations that use the Arbor approach stay abreast of the latest tools and techniques that bring the network to bear in defense against.

WHAT IS ARBOR NETWORKS APS?

OUT OF THE BOX, ON-PREMISE PROTECTION

Arbor Networks APS is the world's most advanced attack mitigation solution. Its proactive analysis and custom mitigation recommendations provide immediate protection against volumetric, state-exhaustion and application-layer DDoS attacks before service performance is impacted. Arbor Networks APS is enhanced by intelligent Cloud Signaling, to reduce mitigation time to as little as five seconds even when attacks are big enough to overwhelm on-premises protection. The easy-to-deploy Arbor Networks APS platform requires little to no user interaction, for simple protection against complex attacks.

AUTOMATED, REAL-TIME INTELLIGENCE

Our DDoS ATLAS intelligence feed is updated automatically by the latest global threat intelligence from Arbor's Security & Engineering Response Teams (ASERT), which have real-time visibility into more than 120 Top of the world's Internet traffic. The in-depth reporting is easy to understand, alongside detailed mitigation forensics. Our Managed APS (M-APS) Service optimizes your DDoS protection with industry-leading expertise that has proven to stay one step ahead of even the largest and most complex malicious threats.

INBOUND AND OUTBOUND BLOCKING

The expanded DDoS mitigation capabilities of Arbor Networks APS, backed by ATLAS real-time intelligence and reputation-based research from ASERT, prevent internal systems from being compromised by both inbound and outbound malicious activity. This intelligence allows in-depth analysis via domain and IP reputation, ensuring the detection and mitigation of a wide variety of advanced availability attacks.

FULL-SCALE SUPPORT

Arbor Networks APS supports the detection of both IPv4 and IPv6 attacks. If necessary, you can leverage the benefits of a virtual environment using vAPS, a virtual version of the APS appliance that supports VMware and XVM hypervisors. Our DDoS prevention solution is also able to stop attacks that attempt to evade DDoS protection solutions by encrypting malicious traffic with a built-in SSL acceleration card. This integrated, one-appliance inspection of encrypted traffic allows normal traffic to pass uninteracted, without forcing changes to existing network and application infrastructure.

MAKE FILE SHARING EASY AND SECURE WITH GLOBALSCAPE WORKSPACES

THE POWER OF EFT WITH THE EASE OF USE OF CONSUMER FILE-SHARING SOLUTIONS

REQUEST A DEMO OF THE NEW WORKSPACES TODAY:

<input type="text" value="First Name *"/>	<input type="text" value="Company Size *"/>
<input type="text" value="Last Name *"/>	<input type="text" value="Country *"/>
<input type="text" value="Email *"/>	<input type="text" value="Industry *"/>
<input type="text" value="Company *"/>	<input type="button" value="REQUEST DEMO"/>

Are your end users using an unsafe method of file transfer? Today's workforce wants to easily share information, both inside and outside of the company. Traditional file transfer methods are often circumvented by the end-user because they're just not easy. Many employees have resorted to using consumer-grade file sharing tools, like Dropbox and Box, personal email, or cloud storage services to transfer big files.

WHILE THESE TOOLS MAKE IT FAST AND EASY TO SEND LARGE FILES AND RECEIVE DATA, THEY CREATE SERIOUS PROBLEMS FOR YOU:

Major security issues as business information becomes accessible third parties

Your files are hosted on their platform, ultimately you lose control

No visibility into the flow of information - which files were sent, by whom, and to whom?

SEND LARGE FILES WITHOUT RISK

With Globalscape's new technology, Workspaces, a module of its Managed File Transfer suite, Enhanced File Transfer (EFT™), it is easy to send large files, and your content stays yours every step of the way. Workspaces is a secure, on-premises solution that provides the file sharing functionality of Dropbox in a controlled and visible environment. End users can easily transfer big files of virtually any size or type. Unlike our cloud-based competitors, including Dropbox, all files are hosted in your infrastructure and on-premises, removing unnecessary file transfer risk. By leveraging your existing corporate security infrastructure, you have more control over file transfer security and compliance.

RETAIN FULL FILE TRANSFER VISIBILITY

IT has visibility into who can transfer big files and with whom. You can easily remove user accounts and file sharing privileges, or even remove the folder from Workspaces. When users no longer need transfer big files or access a shared Workspace, you can remove the user account from just the Workspaces folder, or remove the user account from EFT altogether. Administrators retain control of all access to the on-premises file transfer infrastructure, with the security, regulatory compliance, and automation in EFT. Other file sharing platforms, like Dropbox, cannot match this kind of full visibility.

"After reviewing all of our system needs and evaluating numerous secure FTP solutions, we selected Globalscape's Enhanced File Transfer solution because of its powerful and wide-ranging functionality."

—Sachin Narayanapillai, Associate Consultant at UST Global

Watch our Video on Globalscape Enhanced File Transfer™ (EFT™) — Pain-Free Automation, Security, and Visibility

Believe it or not, the greatest threat to data security today is not targeted cyber attacks or fraudulent hackers, it's the carelessness of corporate employees. Without managed file transfers, employees send sensitive data insecurely, putting everyone at risk. Having secure file sync and sharing in place is more important than ever.

Globalscape has secure file transfer solutions to protect the files of any business. Secure your file transfers with our customizable managed file transfer (MFT) suite of products:

Enhanced File Transfer™ (EFT™) SMB

Designed for small-to-medium businesses, EFT™ SMB enables your organization to manage file transfers securely among worldwide offices, clients, and partners, ensuring that data confidentiality and integrity are preserved during transport and storage. EFT SMB has capabilities perfect for small businesses that need secure file transfer software and military-grade security, without automation.

EFT Enterprise

Has capabilities perfect for businesses that need automated secure managed file transfer software, military-grade security, and amazing load capacity. Some of our largest clients transfer thousands of files per second using EFT Enterprise.

EFT SaaS

Hosted or Managed Information Exchange (MIX) for secure file transfer in the cloud with "pay-as-you-go" pricing and no upfront infrastructure costs lets you have a secure file sharing solution in place immediately.

"After reviewing all of our system needs and evaluating numerous secure FTP solutions, we selected Globalscape's Enhanced File Transfer solution because of its powerful and wide-ranging functionality."

TOWERSTREAM'S T1 INTERNET OFFERS SUPERIOR BENEFITS WHEN COMPARED WITH OTHER INTERNET SERVICE PROVIDERS.

- ✓ **Quick installation** assures the T1 internet service will be up and running within 3-5 days. With multiple Points of Presence in 12 major markets, we bring the most dependable business-class internet straight to your door, no strings attached.
- ✓ **Redundancy** will never present problems when using our T1 internet service. While other business-class internet service providers may rely on each other during a system failure, our T1 line does not rely on legacy phone company infrastructure.
- ✓ **Scalability** is part of all successful business endeavors and Towerstream recognizes that your business's needs change and grow, therefore require an intelligible fixed wireless internet service. With one simple call you can add additional T1 lines to your existing business internet service anytime your bandwidth demands evolve.
- ✓ **Symmetrical bandwidth** implies uploading speed will equal in strength and quality to downloading speed. Our fixed wireless internet connection caters to easy hosting, VOIP, video streaming, cloud computing, transferring data and more.
- ✓ An **industry leading Service Level Agreement**, or SLA, is our way of guaranteeing reliable business-class internet service. While your fixed wireless internet connection whizzes behind the scenes, our gigabit mesh Ethernet Backbone, looms 800 feet over the city making sure that your company's service stays on track.
- ✓ We consider **open communication** with our clients paramount towards building strong and lasting relationships. Our expertly trained support team is available to answer any inquiries related to your T1 internet service or any other business internet package we provide, 24 hours a day and 7 days a week. A request form, as well as a link to our online service quote feature, are also available on our website support page.

TOWERSTREAM'S FASTER THAN FIBER T1 INTERNET SERVICE IS THE RIGHT CHOICE FOR YOUR BUSINESS NEEDS.

Connecting major United States markets by offering powerful reliable and symmetrical bandwidth speeds, Towerstream's T1 internet service is a unique product that performs flawlessly and integrates smoothly with our client's needs. As a leading high-speed business internet provider, Towerstream delivers fixed wireless internet services for all clients interested in a reliable business internet performance.

Our focus for the T1 line is not only to offer a faster-than-fiber fixed wireless Internet, but also to customize this service to fit each and every single client like a glove. We assess your needs and implement the best business-class internet features your company requires in order to thrive.

The T1 internet package offers high-speed business internet starting at 1.5mbps, is stand-alone like all our other business-class internet services, and displays low latency and high quality - all at a competitive price. For \$199 per month the T1 line will guarantee that your fixed wireless internet connection is available at all times.

Explore our website, give us a call, or read our blog posts to find out more about our T1 internet service, what our clients are saying, and other packages that might be a better fit for your business needs.

10 Tips for Minimizing the Duration and Impact of a Security Breach

The SecureWorks Incident Management and Response team helps organizations of all sizes and across all industries prepare for, respond to and recover from even the most complex and large-scale security incidents.

Based on direct experience working with customers during security incidents over the past year, and incorporating threat intelligence on the latest tactics, techniques and procedures (TTP) that threat actors employ, this white paper outlines the following recommendations to help IT and IT security organizations minimize the duration and impact of a security breach.

Fill out the form to get the top 10 tips on implementing a security incident response plan.

Advancing Endpoint Security

The Importance of Threat Intelligence, Visibility and Disrupting the Kill Chain

43 percent of enterprises polled in Ponemon Institute's 2014 State of Endpoint Risk Report said their endpoints had been the entry point for an Advanced Persistent Threat (APT) during the previous 12 months. To make matters worse, just 24 percent said their endpoint security technologies alerted staff to a potential breach.

Securing the vast array of endpoints used by employees is challenging organizations of all sizes. However, IT and IT Security staff must address the tremendous risk posed by inadequate protections on endpoints.

Perhaps now more than ever, endpoint security requires a comprehensive approach. In this paper, we will discuss how businesses big and small can effectively fight back.

Learn the problems surrounding sophisticated threats, and the best solution—fill out the form below to download the white paper.

Determining the True Costs of a Data Breach

When a data breach occurs, the natural reaction is to think about the short-term impact. Most companies focus on assessing the damage, developing a response, and securing funds to pay for fines, legal fees, consulting third parties, and consumer identity protection services.

The real challenge is to mitigate risk to the organization from the long-term effects, such as class-action lawsuits, damage to brand reputation, erosion of consumer trust, and lost business opportunities.

This paper takes an in-depth look at the true costs—both short and long term—of a data breach, and provides steps and tips that executive teams and security leaders can use to determine and reduce the true cost of a data breach.

Fill out the form below to download the white paper and learn how to get better prepared for a breach.

ForgeRock Identity Platform

Forging a New Future with Identity Relationship Management

Identity and Access Management (IAM) services were traditionally built for a company's internal use, to assist with manual on and off boarding, and establishing access privileges to company data and systems behind the firewall.

Today though, a company must implement a dynamic IAM solution that supports digital transformation, Internet of Things (IoT), and serves employees as well as partners, prospects, customers, and devices, regardless of location.

ForgeRock embraces this shift from internal, on-premises IAM to Identity Relationship Management (IRM) - public-facing, secure, and accessible identity as a business enabler. ForgeRock's next-generation IRM platform is designed to empower CEOs and enterprises to engage with partners, prospects, and customers via new revenue-generating services, while continuing to maintain our proven traditional IAM capabilities.

Download Whitepaper

Achieving Scalable Access Control and Privacy Protection with User-Managed Access

With so much data online, absolute secrecy of private or confidential information is impractical because, often enough, you must share it for good reason, such as disclosing your income to your tax accountant or sharing your health information with your insurance and potentially with different doctors. In addition to software safeguards, ensuring that proprietary information is delivered only into the right hands at the right time requires preplanning and tool support.

As part of its OpenUMA project, ForgeRock is implementing the User-Managed Access specification. UMA is a profile of OAuth that offers standardized, modern Web APIs, resolving many issues in authorization, privacy, and consented sharing. Most importantly, UMA facilitates optimum user control, a key requirement in privacy protection.

Accelerating Application Performance – Without Compromising Enterprise Security

For years, companies have been adding layer upon layer of threat detection tools to their arsenal, yet data compromise is accelerating.

Hybrid networks have improved the business user's productivity, but with the complexities of today's IT environment, implementing tight security measures while maintaining optimal performance has become a significant challenge.

However, Riverbed's unique solution is purpose built with security in mind, so that the rest comes easily. Read on for an in-depth look at the growing threats in enterprise security and how Riverbed tackles each one.

F5

The F5 Security for Service Providers Reference Architecture

Communications service providers (CSPs) must ensure that customers can successfully make calls and use their smartphone apps with reliable connectivity, and provide differentiated services that enhance competitiveness and can boost relatively flat revenue streams. Service providers therefore need to guarantee superior network quality without adding complexity or cost. Because security threats have a directly detrimental impact on network quality and customer experiences, security is a top priority, and CSPs must constantly defend against a growing number of threats.

F5 offers a suite of dynamic, multi-layered security solutions capable of meeting these CSP needs across the entire service delivery architecture. This solution breadth, which is necessary to protect the entire CSP infrastructure, cannot be provided by traditional firewalls and point products. F5 security solutions help CSPs to optimize, secure, and monetize their networks by simplifying their delivery architectures and operations, boosting service availability and resiliency, and providing application awareness and control while reducing costs.

Get in-depth insights into why F5's security solution works—fill out the form.

Scaling Mobile Network Security for LTE

A Multi-Layer Approach

The way the network security domain has been pieced together over time has served mobile operators well enough until now. The business model and technology environment are changing fundamentally today, and if the network security domain doesn't evolve with that, it will risk compromising operators' ability to protect the network.

With LTE, the network must scale to keep pace with traffic growth and, particularly, strong growth in signaling traffic. The threat landscape is evolving to generate increasingly breaching outcomes, and the technology and architecture of the mobile network is transforming. The seismic shift to all-IP networking protocols is exposing the operator to more threats, while virtualization provides new opportunities to render the security architecture more flexible and ultimately more robust and effective.

A network security domain that is fit for purpose in the emerging LTE era will increasingly require a multi-layer approach across all the key layers and locations in the network.

What's the case for a multi-layer security strategy? Fill out the form to find out.
